

GETTING THE WORK DONE FAST AND EASY

Our forward plates all have one thing in common – they keep you going without interruption. The part of the range specialised in granular soil has been designed for compacting thin to medium layers. Silt and gravel require good climbing capacity, high centrifugal forces and high speeds. Husqvarna LF 160 is fast and it belongs to the most powerful machines on the market.

All LF compactors are factory prepared for mounting a block paving kit to protect paving blocks from cracking. The patented low vibration handle is standard, and designed to minimize strain on your hands and arms as well as contribute to a safer, more productive and enjoyable workday.

DAMPING VIBRATION

In addition to the standard handle, all forward plates are equipped with a patented vibration damping handle that lowers the vibration levels below 2 m/s^2 , allowing for a full day's work.

EASY LIFTING

The machine has a standard lifting eye for crane lifting. It's positioned to keep the machine in balance during lifting.
